

Acronis® Backup & Recovery™ 10

A family of products for data backup, integrated system recovery and data deduplication across physical and virtual environments

Based on Acronis' patented disk imaging and bare metal restore technologies, Acronis® Backup & Recovery™ 10 is our next generation disaster recovery product family for physical and virtual environments, succeeding the Acronis® True Image product line. It is designed to provide centralised management of all backup and recovery activities to help organisations meet challenging Recovery Time Objectives (RTOs). Organisations of all sizes can simplify and automate backup and disaster recovery processes across Windows and Linux environments, including the ability to manage geographically distributed PCs, laptops, workstations, and servers, while scaling to protect thousands of machines. In addition, Acronis Backup & Recovery 10 can deliver affordable deduplication capability that helps IT departments to make a better use of the storage infrastructure and save costs.

Key Benefits

- Advanced restore capabilities to meet Recovery Time Objectives
- Integrated solutions based on a unique software architecture
- Comprehensive protection for virtual environments
- Storage and network savings through data deduplication
- Scalability to thousands of machines to support organisational growth
- Policy-based centralised management for enhanced operational control
- Intuitive interface making Acronis® Backup & Recovery™ 10 easy to install, quick to configure and deploy, and simple to use
